

YOU DESERVE A DIESEL

THE CUMMINS ADVANTAGE FOR MOTORHOMES

When you're in the market for a motorhome, there's more to consider than just the initial price. Comfort, driveability, towing capability, safety, durability, maintenance and resale value are all important considerations. Owning a motorhome is about enjoying life and all that you've accomplished – you deserve a diesel!

TORQUE AND DRIVEABILITY

DIESEL-POWERED COACHES:

- Have higher torque over a wider RPM range for less downshifting in rolling hills
- Provide greater peak torque allowing you to better maintain speed on long uphill climbs
- Deliver strong performance without working as hard

BRAKING AND SAFETY

GREATER CONFIDENCE, SHORTER STOPPING DISTANCES

- Air brakes on diesel-powered coaches provide better stopping power than most hydraulic braking systems with additional assurance that your vehicle will stop if you experience a brake system leak.
- Diesel coaches come with an auxiliary engine brake which provides additional braking horsepower, shorter stopping distances, and greater vehicle control when descending steep grades.
- Reduced risk of brake overheating and brake fade giving you greater confidence on steep downhill grades.

MORE MILES PER GALLON

- Greater efficiency translates to better fuel economy, especially when pulling heavy loads or climbing mountains, which can save you thousands of dollars.
- Owners of diesel-powered RVs can travel twice as far on a tank of fuel, so you can stop when it is most convenient for you.

BIGGER, STRONGER, MORE DURABLE

- Diesels cruise at lower engine speeds, for greater durability.
- Cummins engines come with a 5 year/100,000 mile warranty with options of up to 8 years of full engine coverage.
- Millions of engines in thousands of applications have allowed Cummins to deliver bulletproof reliability.

ADVANTAGE, CUMMINS

These benefits combine to make Cummins the preferred engine choice for motorhome manufacturers and their customers. Higher demand translates to higher resale value, so when it's time to move up to your next diesel-powered RV, you'll discover the ultimate meaning of the Cummins advantage.

YOU DESERVE A DIESEL

DRIVER COMFORT AND CONVENIENCE

- Less noise is by design — the engine is in the back while driving and generator is in the front while sleeping.
- Diesels have two times less noise at cruise speed and four times less noise when pulling hills.
- Driveline configuration allows more space for basement storage.
- Air suspensions on diesel coaches result in less driver fatigue and a smoother ride.

UNPARALLELED CUSTOMER SUPPORT

No matter where you travel in North America, there's an authorized Cummins service provider nearby who can service your engine and generator:

- There are over 3,700 Cummins-authorized service facilities throughout the United States and Canada.
- There are over 60 RV dedicated Coach Care™ facilities capable of handling all types of motorhome service — engines, generators and more.
- Cummins Guidanz™ and the INLINE™ Mini read real-time engine data and email fault information from your smartphone to your service provider for fast diagnosis and operational decision-making.

LESS TO MAINTAIN

- Servicing your Cummins diesel engine once a year for regularly scheduled maintenance will keep you on the road and out of the service shop.
- Owners of RVs equipped with Cummins engines and generators can get both serviced at a single location during the same event.
