

Winter Is Coming.

If you plan on winterizing your RV this year make sure to perform the recommended maintenance on your generator. Cummins offers products that will protect your generator over the winter months so that you will be ready for another season of adventure next year!

OnaFresh™ GXLP Fuel Stabilizer (part# 326-5365) is a premium fuel additive specially formulated for long-lasting prevention of gasoline breakdown during extended RV storage. It protects gasoline engines against gum, varnish and sludge formation as well as fuel system corrosion. We recommend adding this preservative to your fuel, especially on infrequently used coaches. A 16-oz. bottle treats 40 gallons of gasoline.

Onagard™ Storage Fogging Spray (part# 326-5288) is used to protect small engines and other mechanical equipment during off-season storage for up to six months. It prevents rust damage caused by condensation within the engine. It is available in a 12-oz. aerosol can.
