

B6.7-G17

EU Stage V and Tier 4 Final

Description

The new Cummins G-Drive engines are designed with next generation aftertreatment technology, providing an optimised solution to meet EU Stage V, and US Tier 4 Final emissions. This unique and simplistic design brings an improvement in reliability and fuel economy, as well as longer intervals for scheduled maintenance.

Air Control Throttle Reduced operator interface, intake throttle for increased thermal management capability. Aftertreatment specification capable of low load operation up to -25° C.

Cooling System 50°C LAT capability with noise optimized fan.

Air Cleaner Normal and heavy-duty air cleaner options.

Features

Integrated Aftertreatment Design. Full single module (DOC/DPF/SCR) with compact size for reduced installation impact. Industry leading DPF technology expertise with best in class reliability and service intervals.

EGR-Free Design (supported by better NOx conversion performance) allows a higher sulphur tolerance for global capability and puts the B6.7 and L9 on par with lower emissions level engines. A streamlined design also delivers a significant reduction in installation complexity and cost.

Improved Performance Higher power density (vs Tier 4F). Meets ISO 8528 transient and steady state performance.

This engine has been designed in facilities certified to ISO9001 and manufactured in facilities certified to ISO9001 or ISO9002.

This equipment has been designed and tested to meet EU product safety regulations. Material compliance declaration is available upon request
